NORMED LOAD CARRIERS FOR INDUSTRIAL USE AND GLOBAL TRADING

EURO HALF PALLET EPAL 7

PORTFOLIO TREYER - Pallets - Euro Pallets

VERSATILE USE, DURABLE AND ENVIRONMENTALLY SUSTAINABLE

Wooden Euro pallets are one of the most important transport containers in international trade. They are used as exchangeable pallets. As a licensed manufacturer, we supply your chosen amount at the highest quality in any volume with our ultra-modern, fully automatic production facilities.

Our branded products can be traded around the world and meet the stringent requirements of the pharmaceutical and food industries. On request, we can supply them to any of your production sites in Europe „just in time“.

— HYGIENIC, RENEWABLE, ENVIRONMENTALLY-FRIENDLY

SERVICE PORTFOLIO TREYER

VALUE-ADDED SERVICE FROM TREYER

We have been producing German branded products with the "Made by Treyer" seal of quality since 1947. We stand for quality and our wide range of services and advice. Our customers have faith in us as they know that we can always provide the best, most cost-effective solution for any requirement at any time.

OUR SERVICES AT A GLANCE

CONSULTATION SERVICE Through our wide range of products and services, extending from standardised products and special sizes to customised, production line items with individualised product features, we at Treyer have a very diverse knowledge base, coupled with industry-specific know-how and international experience spanning several decades

REPAIR We can repair your defective pallets. This can take place as an exchange service. In other words, we supply our customers with intact, repaired and checked pallets in exchange for defective ones.

IPPC TREATMENT Many countries have introduced quarantine regulations in order to protect domestic woodland from overseas pests. To prevent a large number of different import requirements from emerging, the International Plant Protection Convention (IPPC), part of the UN's Food and Agriculture Organisation (FAO), has issued the ISPM 15 (International Standards for Phytosanitary Measures) „Guidelines for Regulating Wood Packaging Material in International Trade“ for the international shipping of packaging made from solid wood. TREYER's large capacity of drying chambers allows all pallets to be supplied in accordance with the IPPC's ISPM 15 requirements. Our expert staff are happy to explain how to proceed when exporting timber packaging. There is no need to resort to expensive and environmentally unfriendly materials, like plastic, for exports.

STAINING AND IDENTIFICATION You will certainly have come across stained pallets. If you face the risk of your pallets being confused with others or need to be able to recognise them easily, we are happy to suggest ways of making your pallets stand out. We can easily individually brand your pallets, for example with your logo, or stain the entire pallet in a colour of your choice. Your multi-use pallets then stand out and are no longer confused with single-use ones. Loss of pallets is minimised because everyone involved in the logistics chain recognises your pallets straight away.

STATIC CALCULATIONS Static calculations and optimisation of the pallets. At TREYER we would be happy to help you optimise your pallets. We analyse your requirements and loads and calculate the best, safest design for your pallets. We can also perform a static calculation on your pallets, if required.

PURCHASE If you have some pallets that you no longer need, especially EUR and CP pallets, please ask us if we are able to buy them from you.

INVENTORY MANAGEMENT

Warehouse administration and inventory management - create transparency, plan in the long term, save money. Effective inventory management makes it easier to plan budgets and investments, saves you money and supports efficient administration. At TREYER, we guarantee our products will be permanently available in your company and have through our high storage capacity more than 150,000 pallets stocked and roofed immediately available. So you avoid losses in productivity, save money on inventory management and can concentrate fully on your day-to-day business.

TREYER - your experienced supply chain partner

DRYING TREYER has one of the largest drying capacities in southern Germany. We can easily dry your pallets to the desired moisture level so you can place critical products (such as paper, sugar or metal) on them directly after delivery.

BARCODE LABELLING On request, we can place your barcode labels and other labels directly on your products so they are clearly visible and save you the process of labelling and identification upon delivery.

TRANSPORT We are known for our reliable transport logistics and guaranteed timely deliveries. We transport your goods to the desired destination and can deliver „just in time“ on request. If required, we can also handle all logistics processes, such as storage, order picking and customs clearance.
